---

Tutorial for a simple tissue case. They are basically a lined fabric rectangle folded to meet at the center. I make the outer fabric longer than the lining fabric so it automatically folds inside, because I don't like the lining fabric showing at the edge. It also eliminates the need of topstitching. More tutorials are available at my blog: <http://verypurpleperson.com/tutorials>

---

## Step 1 — Materials and equipments

Outer fabric, 22x15 cm (if the outer fabric is thin, iron fusible interfacings to strengthen it) :: Lining fabric, 18x15 cm :: ribbon, 4 cm :: Note: 1 cm seam allowance is included. :: Thread :: Sewing machine :: Iron

---

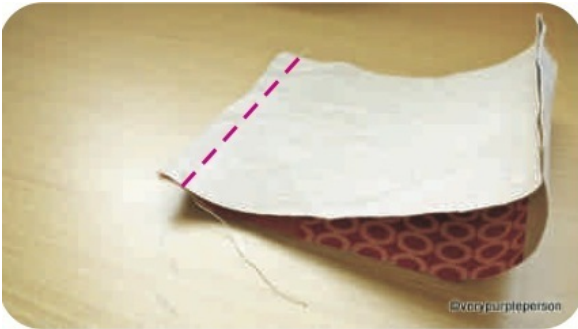

## Step 2 — Step 1

Place lining fabric on top of outer fabric, right sides together. Sew with 1 cm allowance.

---

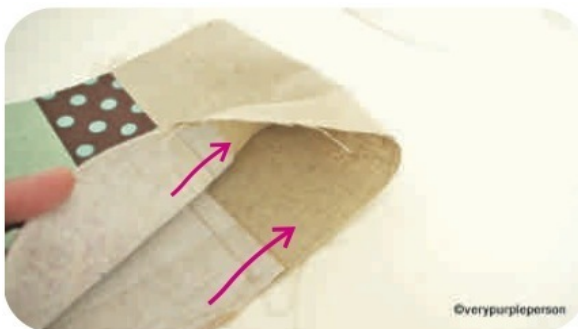

### Step 3 — Step 2

Sew the other side.

---

### Step 4 — Step 3

Turn the right sides out, the fabric is now formed like a tube. Iron the seam allowances toward the lining side.

---

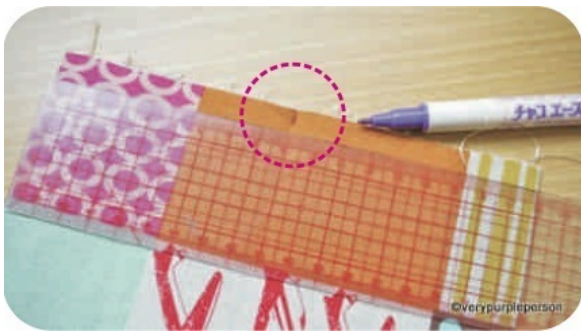

### Step 5 — Step 4

Flatten the tube and iron it. Since the lining fabric is shorter, the outer fabric will fold at the edges. Now we have one lined piece, measured about 18x15 cm.

---

### Step 6 — Step 5

Turn over the lined piece. Mark the center points of both of the long sides.

---

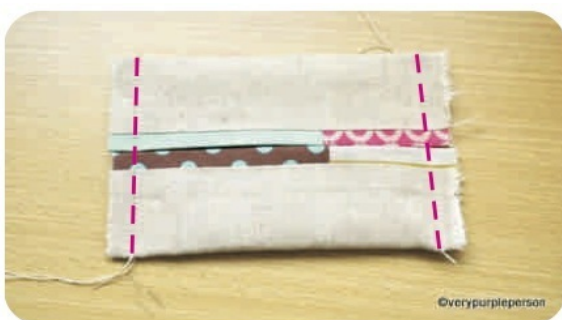

### Step 7 — Step 6

Fold the edges to meet at the center. Fold the 4 cm ribbon and insert it in one of the sides, about 1 cm from folded edge.

---

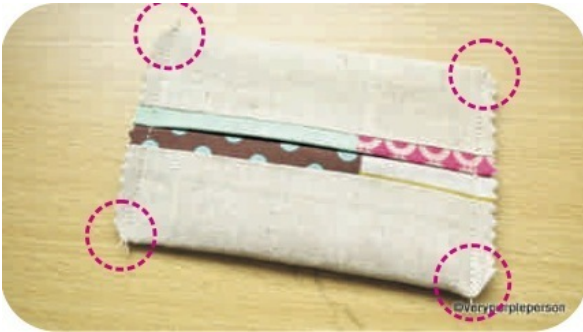

### Step 8 — Step 7

Sew both sides with 1 cm seam allowance.

---

### Step 9 — Step 8

Trim the corners to make turning easier. The raw edges are trimmed with zigzag scissors, you can just leave it raw or finish them using zigzag stitches.

---

### Step 10 — Step 9

Turn the right sides out. Use a rather sharp tool (knitting needle, chopstick, etc) to pick the corners. Iron the finished case one more time for a neater look.

---

### Step 11 — Step 10

Make more!
